SCALE REMOVER

Removing scale using electrolysis - no chemicals - eco friendly

Scaling occurs as a natural process.

Water accumulates minerals like calcium which over time sticks to the insides of pipes eventually causing a blockage.

In commercial installations like reverse osmosis plants, hundreds if not thousands of membranes are constantly under pressure separating salt from water.

Scale deposits build up on each membrane which then requires a chemical flushing to avoid fouling.

- this process is then repeated over and over - which takes a toll on machines, pipes, labour, systems, energy and especially the bottom-line.

This compromised situation cannot be solved by continuing the same practice - so we invented the Scale Remover

Now it can be solved by cleaning the water before entering the pipes.

The Scale Remover is not limited to reverse osmosis

AVOID SCALING AND CORROSION * CLEAN GROUND WATER * CLEAN WELL WATER * PRE-TREATMENT OF REVERSE OSMOSIS PLANTS * COOLING TOWERS * DE-IRONING AND DEMANGANIZATION * HOT WATER SYSTEMS

The Scale Remover improves your water

LOW ENERGY * COST EFFECTIVE * OVERALL SYSTEMS EFFICIENCY ADVANTAGE * ECO SUSTAINABLE * SAVES MONEY AND THE ENVIRONMENT.

Scale Remover testing period: 23.04.2009-28.05.2009 On Site Testing
